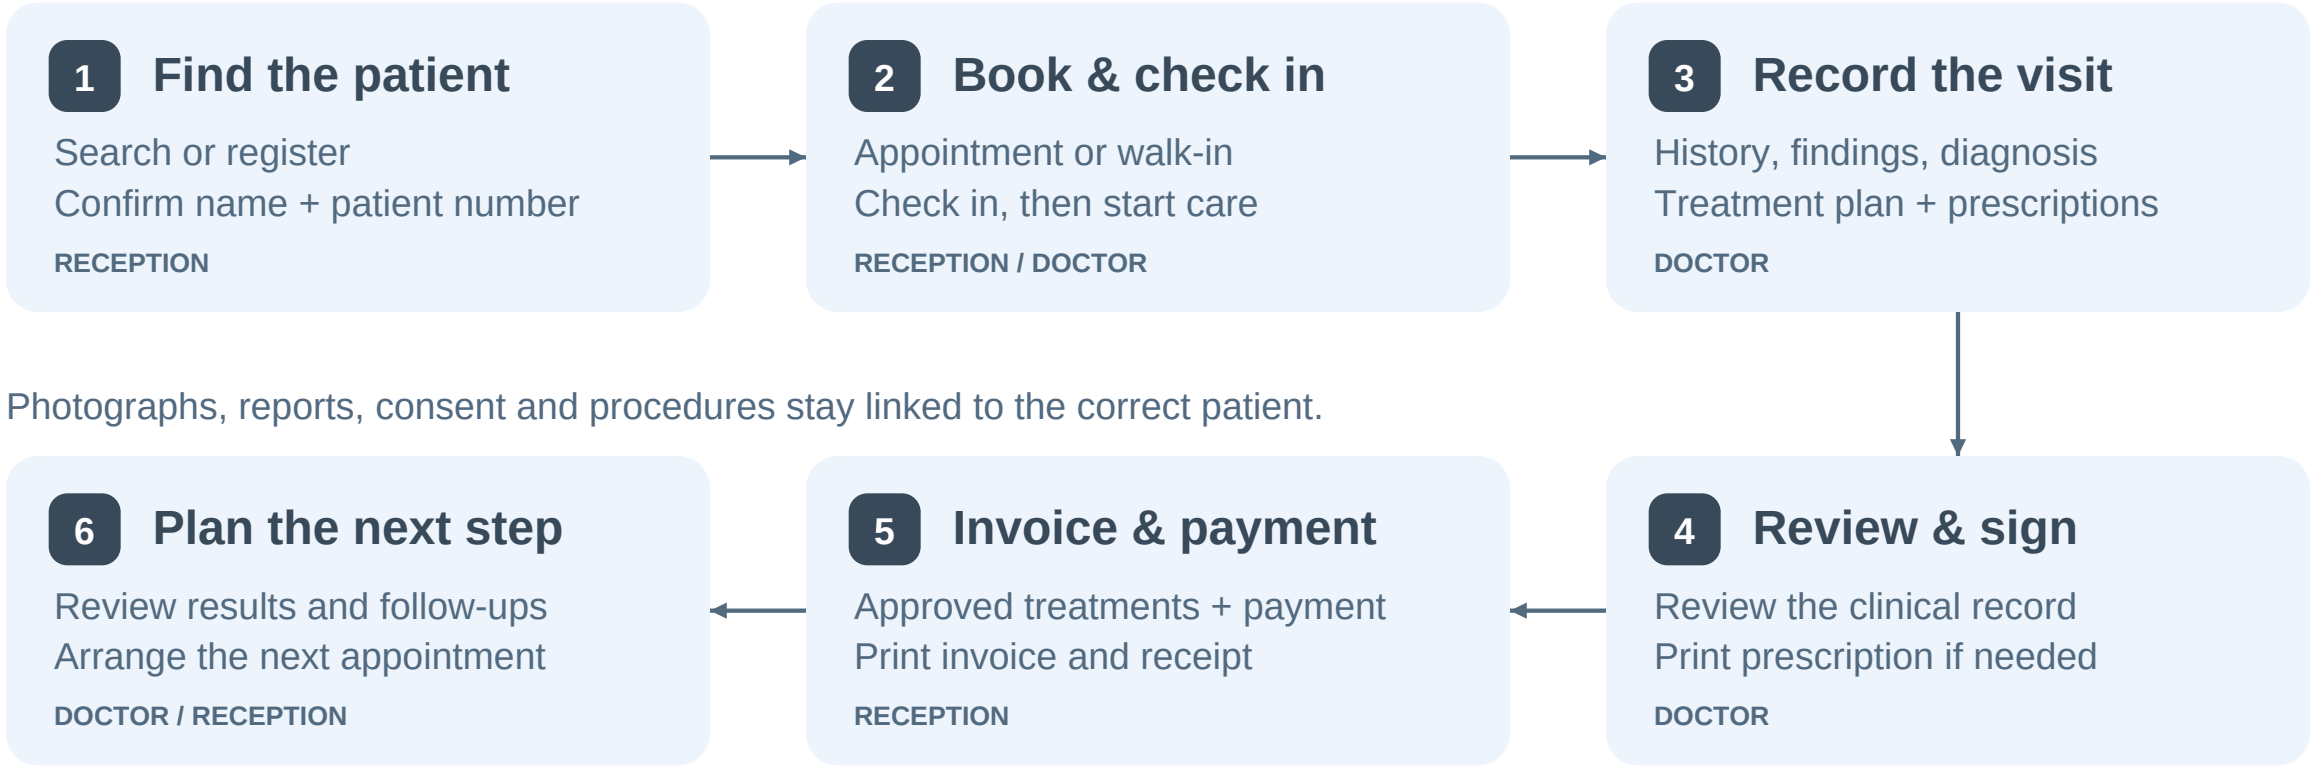
One patient, from arrival to follow-up

A typical visit - each person uses their own account.

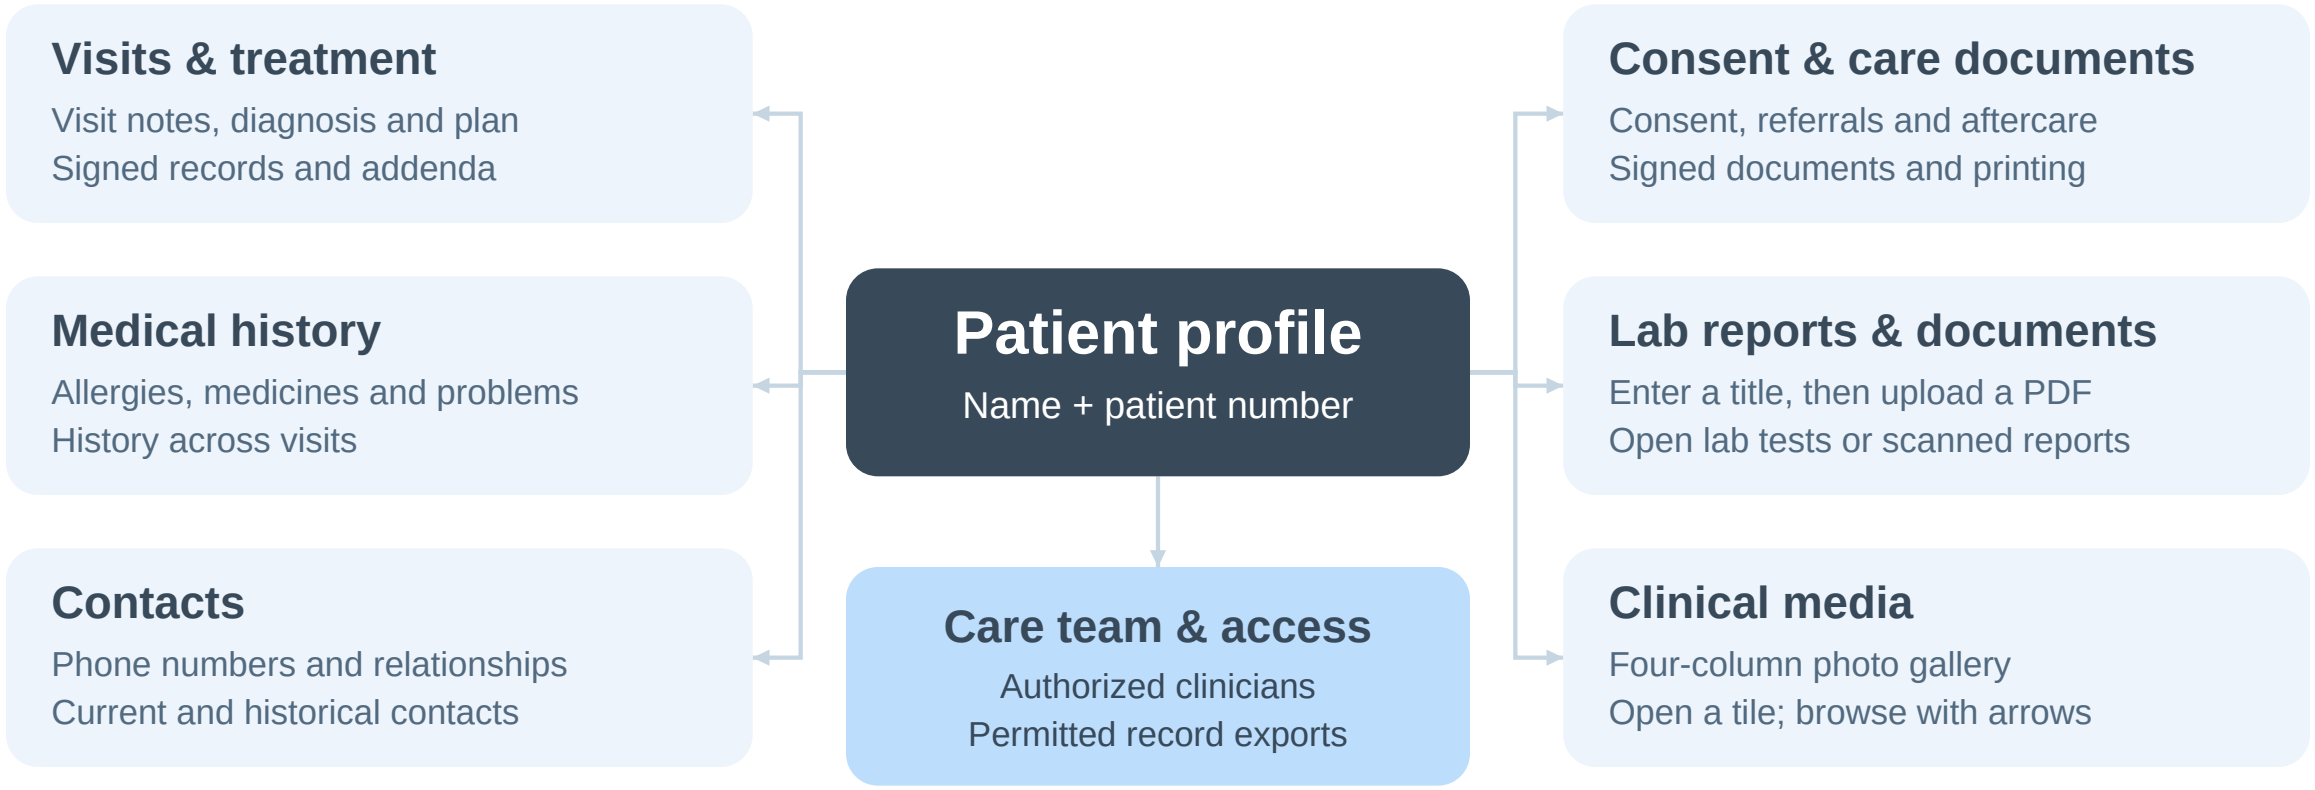


Photographs, reports, consent and procedures stay linked to the correct patient.

Signed records use addenda for corrections. Issued finances use credits or refunds.

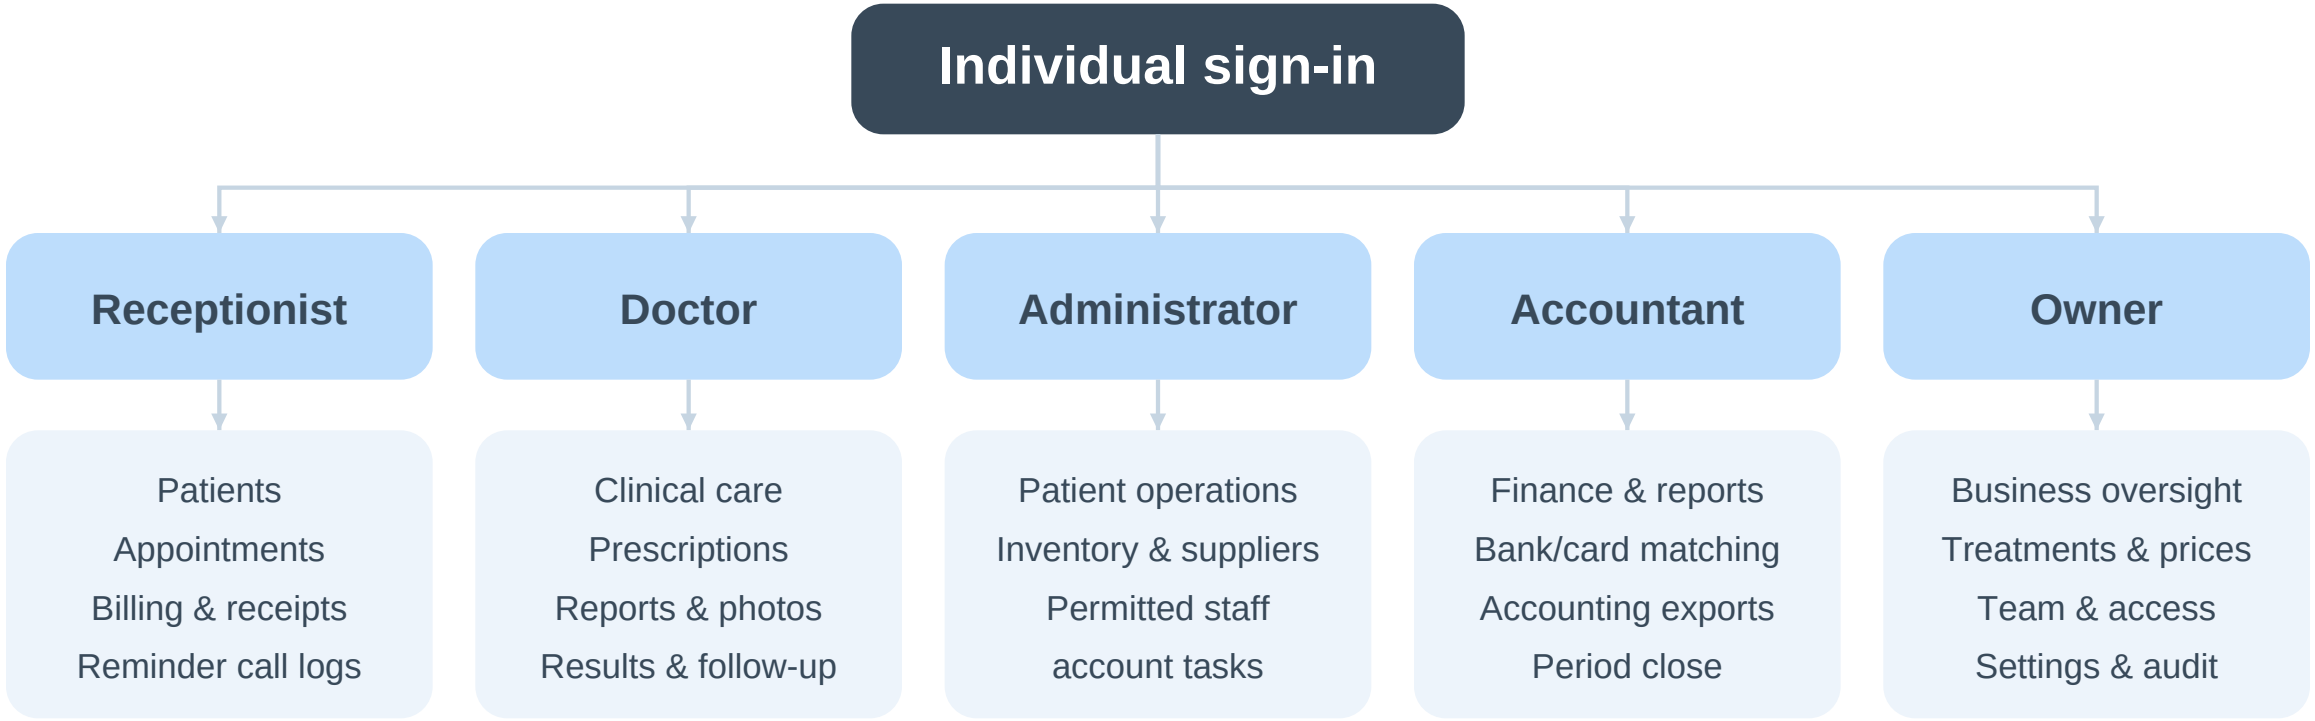
The patient profile is the starting point

Search Patients, confirm two identifiers, then choose the section you need.



Who uses each part of ClinicOS?

The same app, with different access for each person's work.



Business access does not automatically include clinical records or photographs.

A simple 10-minute live demo

Follow one fictional DEMO patient. Switch accounts when the staff role changes.

00-02 min	**Find patient + check in** Patients > Appointments	Receptionist
02-04 min	**Show a visit + prescription** Visits & treatment	Doctor
04-06 min	**Open reports + photo gallery** Lab reports & documents / Clinical media	Doctor
06-08 min	**Invoice + payment + print** Billing	Receptionist
08-10 min	**Show follow-up + next visit** Results & follow-up > Appointments	Doctor / reception

Optional operations tour

Inventory (administrator) > Finance & reports (accountant) > Team & settings (owner)

Use fictional records and files. Reminder calls are logged manually; the app does not send messages.
